of the World Association for Dynamic Psychiatry (WADP)

CREATIVE PROCESSES IN PSYCHOTHERAPY AND PSYCHIATRY

2017

ON THE EDGE OF DISCIPLINES, organized by University of Florence – Health Sciences Dept., and International Foundation Erich Fromm, is an open door day for all those who are interested in the relationship between the Dynamic Psychology and other disciplines.

It is a project *a latere* of the XVIII World Congress of Psychiatry Dynamics (Florence, April 2017) and wants to encourage the debate with participants, creating a vibrant and "open-mind" intersection along the paths traced by the speakers.

Florence, Italy - April 19th to 22nd, 2017

ABSTRACT

The seminar intends to explore some contributions that different disciplines (informatics, logic, paleontology and anthropology) have recently provided to the emergence of new psychodynamic conceptualizations on mental functions in individuals and in groups.

Although an interdisciplinary approach is widely considered necessary in order to afford complex challenges that are posed by the contemporary Sciences of Man, little is known about the phenomena that take place 'at the edge' of disciplines, that is when we try to formulate a scientific problem in a given domain while being open and exposed to conceptualizations, models and practices that are commonly adopted in a different scientific domain.

These phenomena may be relevant at an epistemic level, when trying to formulate new theories in a given domain, as well as at the level of clinical practices: does the positioning of the therapist closer to the edge of his/her disciplinary field allow for the emergence of peculiar modes of creative thinking in the clinical session?
